User Stories for Testing Functionality	Expected Result	Response in app (User Comment)	Result
General Users	Expected Result	Response in app (User Comment)	Result
As a User, I want to be able to apply filters based on genres, so that I can find movies that match my specific interests.	User should have functionality to search just by genre (fast search) should show the user movies based on the genre only.	Fast search functionality is available right from home page and can get used without logging in so immediately available.	Pass
As a user, I want to filter movies based on their availability on different streaming platforms, such as Netflix, Amazon Prime, or Hulu, to streamline my viewing options.	User should have a streaming platforms search options that lets them add movies that are available on certain streaming platforms and display those movies in movie display.	Under the advanced search functionality, multiple streaming services can be selected and listed for use with searching.	Pass
As a user, I want to filter movies based on their availability in different countries, so that I can discover international films that suit my preferences.	User should have a region and language filter that allows them to search for international movies in teh advanced search filter and display movies of the correct language and region.	Under the advanced search functionality, both region and language fields can be adjusted to suit the users requirements or needs. This also allows users to adjust these settings if they're using a VPN or similar.	Pass
As a user, I want to include or exclude movies based on specific keywords or themes, such as "romantic comedy" or "action-packed", to refine my search results.	Users should have a keyword search functionality that allows them to type in keywords and display results based on the specific keywords.	Due to time restrictions, the search functionality for keywords was not implemented in the application prior to submission.	Fail
As a user, I want to filter movies based on their average vote ratings, so that I can discover highly-rated films that align with my tastes.	In Advanced Search user should be able to filter movies by average vote or popularity and display those movies.	Search functionality by selecting rating was not implemented, however the rating can be viewed when the movie is selected. You can also search by popularity or average rating which allows you to prioritise movings that are more popular or that have higher ratings.	Moderate function
Registered Users	Expected Result	Response in app (User Comment)	Result
As a registered user, I want to create and manage my account settings, including language preferences and default filters, to personalize my browsing experience.	User should have the ability to register and login. When logged in user can set search default filters that will stay connected to there profile or language defaults connected to there profile to streamline there future viewing.	Once a user is logged in, these settings can be adjusted easily through the profile settings page. Name, email, language, region and watch providers can all be set, and these are than used as defaults in the search filters.	Pass
As a registered user, I want to maintain a "watched list" of movies that I've already seen, so that they are excluded from future recommendations and searches.	Logged in User should have ability to click "watched button" and see the button change to added, movie should then be displayed in the profile page under Watched List.	Watched list and wish list functionality has been included with the profile page and easy addition through the movie details page. The part missing from this is the automatic exclusion from searches which has not been implemented due to time restrictions.	Moderate function
As a registered user, I want to be able to save movies that I like the look of so that I can watch them later.	Logged in user should have the ability to click a "watch later" button on the movie and see the button change to added, movie should then be seen on users profile page under Watch Later list.	A wish list feature has been included so that users can mark movies for watching down the track and not lose a track of movies that they've stored.	Pass
Specific Users	Expected Result	Response in app (User Comment)	Result
As a parent, I want to filter movies based on appropriation, so that my children can watch appropriate movies.	User should be able to set adult filter on movies to true or false to avoid getting innapropriate movies displayed default should be set to false so this is not an issue.	It was ultimately decided that the adult filter will be permanently set to false as the development team agreed that adult movies shouldn't be retrieved by the application.	Moderate function
As a casual viewer, I want to be able open the application and quickly find a movie without having to sign up.	From the home page search features should be available without having to register as a user.	Both the fast search and advanced search can be used without needing to register or sign in. The fast search in particular only requires one field to be adjusted and then a search can be run. Also, there are defaults applied to all the drop downs so that a search can be instantly done without needing to select any options.	Pass
As a casual viewer, I want a basic set of filters to get my movie choice faster.	Casual viewer should be able to use a fast search feature, that lets them search quickly by genre only.	As mentioned above, the app meets this user story.	Pass
As a movie aficionado, I want a detailed set of filters to get very specific results.	User should have access to detailed advance search options that allow them to search for specific results.	The advanced search currently includes the ability to search for genre, language, region, streaming provider and prioritise the search by a given field. It's moderately detailed however there were a few fields that were omitted due to time constraints.	Moderate function
As a movie aficionado, I want to be able to save settings to save time when I use the application in the future.	From the profile page a registered user should be able to set default preferences such as streaming services languag and region that will save for future searches when logged in.	As mentioned above, the profile page allows users to save settings which are than loaded into the search components as defaults on both the movie page and the movie details page allowing for quicker searches.	Pass
